

Lunar Reconnaissance Orbiter

Teacher Professional Development Workshops

Coming up in 2013

Lunar Workshops for Educators are week-long professional development events designed for grade 6–9 science teachers, sponsored by the *Lunar Reconnaissance Orbiter* (LRO). The workshop program began in 2010 and has a proven record of success, with eight conducted to date around the USA. Workshop materials have also been used at two NLSI PD events.

During the upcoming workshops, teachers:

- Learn about the latest discoveries in lunar science from LRO and other recent lunar missions
- Reinforce their understanding of lunar science concepts
- Gain tools to help address common student misconceptions about the Moon
- Interact with lunar scientists and engineers and work with real LRO data
- Learn how to bring these data and information to their students using hands-on activities aligned with National Science Education Standards and Benchmarks

The workshops will be held twice in 2013, June 24–28 and July 8–12, at NASA GSFC
